
TP N°7 : Développement d'une application web avec Spring Boot, Spring Security, Thymeleaf, Spring Data JPA et MySQL. Les services CRUD

SOMMAIRE

I- Objectifs :	3
II- Outils utilisés :	3
III- Développement de l'application	3
1. pom.xml	3
2. application.properties	6
3. Les modèles.....	6
4. Les Values objects (ou DTO : Data Transfer Object).....	8
5. La couche DAO	12
6. La couche Service.....	13
7. La couche présentation	17
8. Les vues	22
9. Les feuilles de style (*.css).....	27
10. Les images	28
11. La classe de démarrage de Spring Boot	28
12. Le classe de configuration (Java Config).....	29
13. Les tests	30

I- Objectifs :

- ✓ Sécuriser une application WEB avec Spring Security :
 - /login et /welcome : accessible par tous les utilisateurs qui ont un compte.
 - /admin et /rest : accessible uniquement par les utilisateurs ayant le rôle ADMIN.
 - /client : accessible uniquement par les utilisateurs ayant le rôle CLIENT.
- ✓ Les utilisateurs sont stockés dans une base de données MySQL.
- ✓ Les vues pour les services CRUD sont développées avec le moteur de Template : Thymeleaf.
- ✓ Utilisation de Lombok pour ne pas écrire les gettes, les setters, les constructeurs, etc.

II- Outils utilisés :

Dans cet atelier, nous allons utiliser les outils suivants :

- ✓ Eclipse Mars (ou autre) avec le plugin Maven 3.x ;
- ✓ JDK 1.8 ;
- ✓ Connection à Internet pour permettre à Maven de télécharger les dépendances nécessaires (Spring Boot 2.2.0, ...).
- ✓ La base de données MySQL 8.

III- Développement de l'application

1. pom.xml

Créer un projet Maven (soit en utilisant Spring Initializr ou bien Eclipse). Le contenu du fichier pom.xml est :

```
<?xml version="1.0" encoding="UTF-8"?>
<project xmlns="http://maven.apache.org/POM/4.0.0"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
    xsi:schemaLocation="http://maven.apache.org/POM/4.0.0
http://maven.apache.org/xsd/maven-4.0.0.xsd">
  <modelVersion>4.0.0</modelVersion>
  <parent>
    <groupId>org.springframework.boot</groupId>
    <artifactId>spring-boot-starter-parent</artifactId>
    <version>2.2.0.BUILD-SNAPSHOT</version>
    <relativePath /> <!-- lookup parent from repository -->
  </parent>
  <groupId>ma.cigma</groupId>
  <artifactId>springsecurity</artifactId>
  <version>0.0.1-SNAPSHOT</version>
  <name>springsecurity</name>
  <description>Demo project for Spring Boot</description>

  <properties>
    <java.version>1.8</java.version>
  </properties>

  <dependencies>
    <dependency>
```

```

        <groupId>org.springframework.boot</groupId>
        <artifactId>spring-boot-starter-data-jpa</artifactId>
    </dependency>
    <dependency>
        <groupId>org.springframework.boot</groupId>
        <artifactId>spring-boot-starter-security</artifactId>
    </dependency>
    <dependency>
        <groupId>org.springframework.boot</groupId>
        <artifactId>spring-boot-starter-thymeleaf</artifactId>
    </dependency>
    <dependency>
        <groupId>org.springframework.boot</groupId>
        <artifactId>spring-boot-starter-web</artifactId>
    </dependency>
<!-- Pour que les RestController puissent produire le format XML, la dépendance
suivante est nécessaire -->
    <dependency>
        <groupId>com.fasterxml.jackson.dataformat</groupId>
        <artifactId>jackson-dataformat-xml</artifactId>
    </dependency>

    <dependency>
        <groupId>mysql</groupId>
        <artifactId>mysql-connector-java</artifactId>
        <scope>runtime</scope>
    </dependency>
    <dependency>
        <groupId>org.projectlombok</groupId>
        <artifactId>lombok</artifactId>
        <optional>true</optional>
    </dependency>
    <dependency>
        <groupId>org.springframework.boot</groupId>
        <artifactId>spring-boot-starter-test</artifactId>
        <scope>test</scope>
        <exclusions>
            <exclusion>
                <groupId>org.junit.vintage</groupId>
                <artifactId>junit-vintage-engine</artifactId>
            </exclusion>
            <exclusion>
                <groupId>junit</groupId>
                <artifactId>junit</artifactId>
            </exclusion>
        </exclusions>
    </dependency>
    <dependency>
        <groupId>org.springframework.security</groupId>
        <artifactId>spring-security-test</artifactId>
        <scope>test</scope>
    </dependency>
</dependencies>

```

```

<build>
  <plugins>
    <plugin>
      <groupId>org.springframework.boot</groupId>
      <artifactId>spring-boot-maven-plugin</artifactId>
    </plugin>
  </plugins>
</build>

</project>

```

*Remarquer les dépendances suivantes :

```

>  spring-boot-starter-data-jpa : 2.2.0.BUILD-SNAPSHOT [compile]
>  spring-boot-starter-security : 2.2.0.BUILD-SNAPSHOT [compile]
>  spring-boot-starter-thymeleaf : 2.2.0.BUILD-SNAPSHOT [compile]
>  spring-boot-starter-web : 2.2.0.BUILD-SNAPSHOT [compile]
>  jackson-dataformat-xml : 2.9.8 [compile]
   mysql-connector-java : 5.1.17 [runtime]
   lombok : 1.18.8 [compile]
>  spring-boot-starter-test : 2.2.0.BUILD-SNAPSHOT [test]
>  spring-security-test : 5.2.0.M2 [test]

```

2. application.properties

```

spring.datasource.url=jdbc:mysql://localhost:3306/TP7?createDatabaseIfNotExist=true&autoReconnect=true&useSSL=true&useUnicode=yes&useLegacyDatetimeCode=false&serverTimezone=UTC
spring.datasource.username = root
spring.datasource.password = root
spring.datasource.driver-class-name=com.mysql.jdbc.Driver
spring.jpa.show-sql = true
spring.jpa.hibernate.ddl-auto = update
spring.jpa.properties.hibernate.dialect = org.hibernate.dialect.MySQL5InnoDBDialect

```

3. Les modèles

```

package ma.cigma.springsecurity.service.model;

import javax.persistence.Entity;
import javax.persistence.GeneratedValue;
import javax.persistence.Id;

import lombok.Data;
import lombok.NoArgsConstructor;

@Data
@NoArgsConstructor
@Entity
public class Emp {
    @Id
    @GeneratedValue
    private Long id;
    private String name;
    private Double salary;
    private String fonction;

    public Emp(String name, Double salary, String fonction) {
        super();
        this.name = name;
        this.salary = salary;
        this.fonction = fonction;
    }
}

```

```

package ma.cigma.springsecurity.service.model;

import javax.persistence.Column;
import javax.persistence.Entity;
import javax.persistence.GeneratedValue;
import javax.persistence.GenerationType;
import javax.persistence.Id;
import javax.persistence.Table;

import lombok.Data;
import lombok.NoArgsConstructor;

@Data
@Entity
@Table(name = "role")
@NoArgsConstructor
public class Role {
    @Id
    @GeneratedValue(strategy = GenerationType.AUTO)
    @Column(name = "role_id")
    private int id;
    @Column(name = "role")
    private String role;

    public Role(String role) {
        this.role = role;
    }
}

```

```

package ma.cigma.springsecurity.service.model;

import java.util.ArrayList;
import java.util.List;

import javax.persistence.CascadeType;
import javax.persistence.Entity;
import javax.persistence.GeneratedValue;
import javax.persistence.Id;
import javax.persistence.JoinColumn;
import javax.persistence.JoinTable;
import javax.persistence.ManyToMany;
import javax.persistence.Table;
import javax.validation.constraints.NotEmpty;

import org.hibernate.validator.constraints.Length;

import lombok.Data;
import lombok.NoArgsConstructor;

@Data
@Entity
@Table(name = "user")
@NoArgsConstructor
public class User {
    @Id
    @GeneratedValue
    private Long id;

```

```

    @Length(min = 5, message = "*Your username must have at least 5 characters")
    @NotEmpty(message = "*Please provide an user name")
    private String username;

    @Length(min = 5, message = "*Your password must have at least 5 characters")
    @NotEmpty(message = "*Please provide your password")
    private String password;

    @ManyToMany(cascade = CascadeType.ALL)
    @JoinTable(name = "user_role", joinColumns = @JoinColumn(name = "user_id"),
inverseJoinColumns = @JoinColumn(name = "role_id"))
    private List<Role> roles = new ArrayList<Role>();
}

```

4. Les Values objects (ou DTO : Data Transfer Object)

```

package ma.cigma.springsecurity.domaine;

import lombok.Data;

@Data
public class EmpVo {
    private Long id;
    private String name;
    private Double salary;
    private String fonction;
    public EmpVo() {
        super();
    }
    public EmpVo(Long id, String name, Double salary, String fonction) {
        this(name,salary,fonction);
        this.id = id;
    }

    public EmpVo(String name, Double salary, String fonction) {
        super();
        this.name = name;
        this.salary = salary;
        this.fonction = fonction;
    }
}

```

```

package ma.cigma.springsecurity.domaine;

import lombok.Data;
import lombok.NoArgsConstructor;

@Data
@NoArgsConstructor
public class RoleVo {
    private int id;
    private String role;

    public RoleVo(String role) {

```

```

        this.role = role;
    }
}

```

```

package ma.cigma.springsecurity.domaine;

import java.util.ArrayList;
import java.util.List;

import lombok.Data;
import lombok.NoArgsConstructor;

@Data
@NoArgsConstructor
public class UserVo {
    private Long id;
    private String username;
    private String password;
    private List<RoleVo> roles = new ArrayList<RoleVo>();

    public UserVo(String username, String password, List<RoleVo> roles) {
        this.username = username;
        this.password = password;
        this.roles=roles;
    }
}

```

```

package ma.cigma.springsecurity.domaine;

import java.util.ArrayList;
import java.util.List;

        for (UserVo userVo : voList) {  
            boList.add(toBo(userVo));  
        }  
        return boList;  
    }  
}
```

5. La couche DAO

```
package ma.cigma.springsecurity.dao;

import java.util.List;

import org.springframework.data.jpa.repository.JpaRepository;
import org.springframework.data.jpa.repository.Query;

import ma.cigma.springsecurity.service.model.Emp;

/**
 *
 * Ici, l'interface EmpRepository hérite de l'interface JpaRepository de Spring
 * DATA. Il faut juste préciser la classe "Modele" et le type de la classe qui
 * représente la clé primaire.
 *
 * Spring Data prendra en charge l'implémentation des 04 méthode ci-dessous à
 * condition de respecter la nomenclature supportée par Spring Data.
 *
 * @Query offre la possibilité d'exécuter des requêtes plus complexes.
 *
 */
public interface EmpRepository extends JpaRepository<Emp, Long> {
    List<Emp> findBySalary(Double salary);

    List<Emp> findByFonction(String designation);

    List<Emp> findBySalaryAndFonction(Double salary, String fonction);

    @Query(" SELECT e from Emp e where e.salary=(select MAX(salary) as salary FROM Emp)")
    Emp getEmpHavaingMaxSalary();
}
```

```
package ma.cigma.springsecurity.dao;

import org.springframework.data.jpa.repository.JpaRepository;

import ma.cigma.springsecurity.service.model.User;

public interface UserRepository extends JpaRepository<User, Long> {
    User findByUsername(String userName);
}
```

```
package ma.cigma.springsecurity.dao;

import java.util.List;

import org.springframework.data.jpa.repository.JpaRepository;
```

```
import ma.cigma.springsecurity.service.model.Role;

public interface RoleRepository extends JpaRepository<Role, Integer> {
    List<Role> findByRole(String role);
    List<Role> findAll();
}
```

6. La couche Service

```
package ma.cigma.springsecurity.service;
import java.util.List;

import ma.cigma.springsecurity.domaine.EmpVo;
public interface IEmpService {
    List<EmpVo> getEmployees();
    void save(EmpVo emp);
    EmpVo getEmpById(Long id);
    void delete(Long id);
    List<EmpVo> findBySalary(Double salary);
    List<EmpVo> findByFonction(String designation);
    List<EmpVo> findBySalaryAndFonction(Double salary, String fonction);
    EmpVo getEmpHavaingMaxSalary();
    //Pour la pagination
    List<EmpVo> findAll(int pageId, int size);
    //pour le tri
    List<EmpVo> sortBy(String fieldName);
}
```

```
package ma.cigma.springsecurity.service;

import java.util.List;

import org.springframework.beans.factory.annotation.Autowired;
import org.springframework.data.domain.Page;
import org.springframework.data.domain.PageRequest;

<body>
<div class="container">

    <form th:action="@{/logout}" method="get">
        <button class="btn btn-md btn-danger btn-block" name="registration"
            type="Submit">Logout
        </button>
    </form>

    <div class="panel-group" style="margin-top:40px">
        <div class="panel panel-primary">
            <div class="panel-heading">
                <span th:utext="${userName}"></span>
            </div>
            <div class="panel-body">
                
            </div>
            <p class="admin-message-text text-center" th:utext="${clientMessage}"></p>
        </div>
    </div>
</div>
</body>
</html>

```

9. Les feuilles de style (*.css)

Les feuilles de style doivent être dans le dossier /resources/static.

home.css (/resources/static/css/home.css)

```

.admin-message-text {
    font-style: normal;
    font-size: 22px;
    color: #004080;
}

```

login.css (/resources/static/css/login.css)

```

.wrapper {
    margin-top: 80px;
    margin-bottom: 20px;
}

.form-signin {
    max-width: 420px;
    padding: 30px 38px 66px;
    margin: 0 auto;
    background-color: #eee;
    border: 3px dotted rgba(0,0,0,0.1);
}

.form-signin-heading {

```

```

        text-align:center;
        margin-bottom: 30px;
    }

    .form-control {
        position: relative;
        font-size: 16px;
        height: auto;
        padding: 10px;
    }

    input[type="text"] {
        margin-bottom: 0px;
        border-bottom-left-radius: 0;
        border-bottom-right-radius: 0;
    }

    input[type="password"] {
        margin-bottom: 20px;
        border-top-left-radius: 0;
        border-top-right-radius: 0;
    }

```

10. Les images

Copier les images client.jsp, data.jsp et admin.jsp dans le dossier /resources/static/images.

11.La classe de démarrage de Spring Boot

```

package ma.cigma.springsecurity;

import java.util.Arrays;

import org.springframework.beans.factory.annotation.Autowired;
import org.springframework.boot.CommandLineRunner;
import org.springframework.boot.SpringApplication;
import org.springframework.boot.autoconfigure.SpringBootApplication;
import org.springframework.context.annotation.Bean;
import org.springframework.security.crypto.bcrypt.BCryptPasswordEncoder;

import ma.cigma.springsecurity.domaine.EmpVo;
import ma.cigma.springsecurity.domaine.RoleVo;
import ma.cigma.springsecurity.domaine.UserVo;
import ma.cigma.springsecurity.service.IEmpService;
import ma.cigma.springsecurity.service.IUserService;

@SpringBootApplication
public class LoginCRUDApplication implements CommandLineRunner {

    @Autowired
    private IUserService userService;

    @Autowired

```

```

private IEmpService empService;

public static void main(String[] args) {
    SpringApplication.run(LoginCRUDApplication.class, args);
}

@Bean
public BCryptPasswordEncoder passwordEncoder() {
    BCryptPasswordEncoder bCryptPasswordEncoder = new BCryptPasswordEncoder();
    return bCryptPasswordEncoder;
}

@Override
public void run(String... args) throws Exception {
    userService.cleanDataBase();
    userService.save(new RoleVo("ADMIN"));
    userService.save(new RoleVo("CLIENT"));

    RoleVo roleAdmin = userService.getRoleByName("ADMIN");
    RoleVo roleClient = userService.getRoleByName("CLIENT");
    UserVo admin1 = new UserVo("admin1", "admin1", Arrays.asList(roleAdmin));
    UserVo client1 = new UserVo("client1", "client1", Arrays.asList(roleClient));
    userService.save(admin1);
    userService.save(client1);

    // *****
    empService.save(new EmpVo("emp1", 10000d, "Fonction1"));
    empService.save(new EmpVo("emp2", 20000d, "Fonction3"));
    empService.save(new EmpVo("emp3", 30000d, "Fonction4"));
    empService.save(new EmpVo("emp4", 40000d, "Fonction5"));
    empService.save(new EmpVo("emp5", 50000d, "Fonction6"));
}
}

```

12. Le classe de configuration (Java Config)

```

package ma.cigma.springsecurity.configuration;

import org.springframework.beans.factory.annotation.Autowired;
import org.springframework.context.annotation.Configuration;
import org.springframework.security.config.annotation.authentication.builders.AuthenticationManagerBuilder;
import org.springframework.security.config.annotation.web.builders.HttpSecurity;
import org.springframework.security.config.annotation.web.builders.WebSecurity;
import org.springframework.security.config.annotation.web.configuration.EnableWebSecurity;
import org.springframework.security.config.annotation.web.configuration.WebSecurityConfigurerAdapter;
import org.springframework.security.crypto.bcrypt.BCryptPasswordEncoder;
import org.springframework.security.web.util.matcher.AntPathRequestMatcher;

import ma.cigma.springsecurity.service.IUserService;

@Configuration

```

```

@EnableWebSecurity
public class SecurityConfiguration extends WebSecurityConfigurerAdapter {

    @Autowired
    private BCryptPasswordEncoder bCryptPasswordEncoder;

    @Autowired
    private IUserService userService;

    @Override
    protected void configure(AuthenticationManagerBuilder auth) throws Exception {
        auth.userDetailsService(userService).passwordEncoder(bCryptPasswordEncoder);
    }

    @Override
    protected void configure(HttpSecurity http) throws Exception {

        http.authorizeRequests().
            antMatchers("/rest/**").hasAuthority("ADMIN");

        http.authorizeRequests().
            antMatchers("/").permitAll().
            antMatchers("/login").permitAll().
            antMatchers("/welcome").hasAnyAuthority("ADMIN", "CLIENT").
            antMatchers("/admin/**").hasAuthority("ADMIN").
            antMatchers("/client/**").hasAuthority("CLIENT").
            anyRequest().authenticated().
            and().csrf().disable().
            formLogin().loginPage("/login").
            failureUrl("/login?error=true").
            defaultSuccessUrl("/welcome").
            usernameParameter("username").
            passwordParameter("password").
            and().logout().logoutRequestMatcher(new
AntPathRequestMatcher("/logout")).logoutSuccessUrl("/").
            and().exceptionHandling().accessDeniedPage("/access-denied");
    }

    @Override
    public void configure(WebSecurity web) throws Exception {
        web.ignoring().antMatchers("/resources/**", "/static/**", "/css/**", "/js/**",
"/images/**");
    }
}

```

13.Les tests

*Lancer la méthode main de la classe LoginCRUDApplication et ensuite accéder au site <http://localhost:8080>. Le résultat est :

Welcome

client1

Login

- Entrer admin1/admin1 et cliquer sur Login :

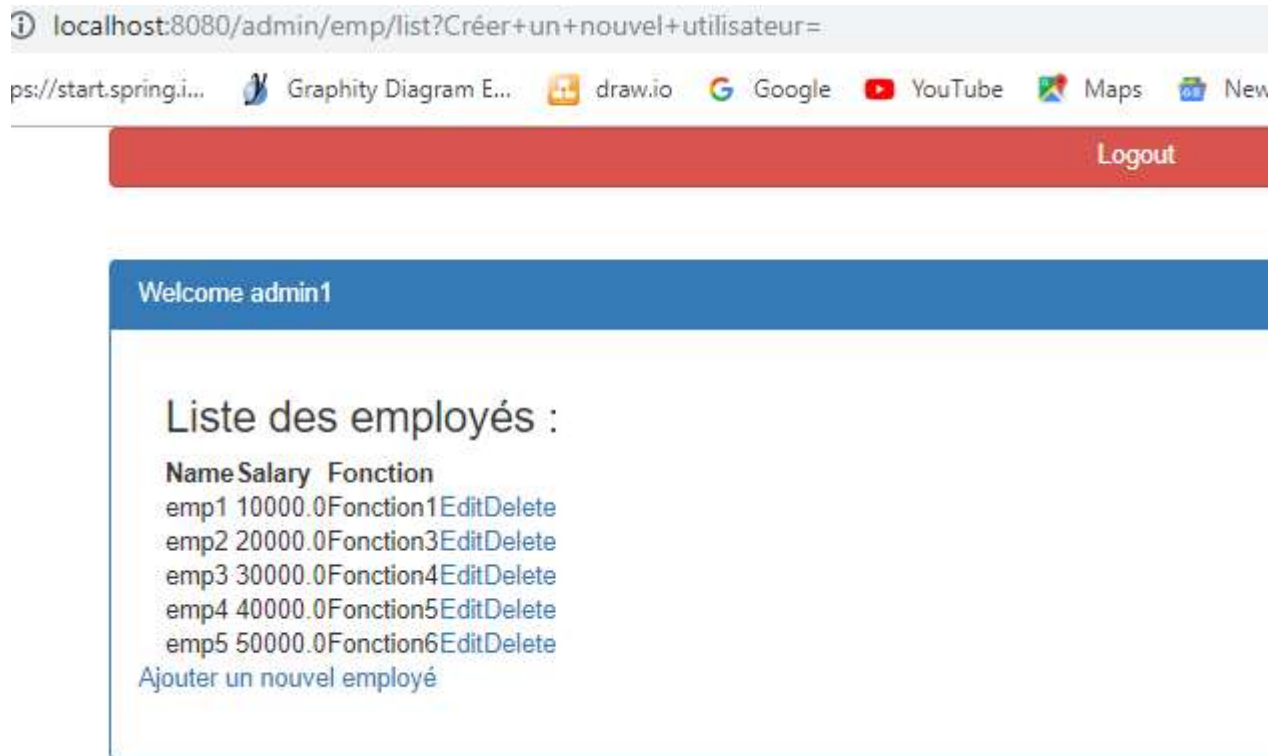

- Cliquer sur « Pour les clients » :

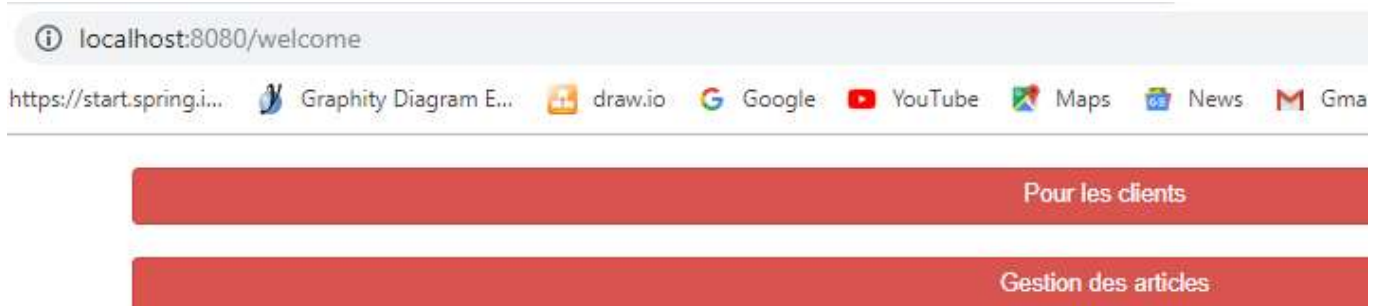

Vous n'avez pas le droit d'accéder à cette page. Merci de vous s'authentifier

- Cliquer sur « Gestion des articles » :

- De même, entrer client1/client1 :

- Essayer de cliquer sur « Gestion des articles » :

Vous n'avez pas le droit d'accéder à cette page. Merci de vous s'authentifier

- S'authentifier avec admin1/admin1 et aller au lien : <http://localhost:8080/rest/emp>

```

▼ <List>
  ▼ <item>
    <id>23</id>
    <name>emp1</name>
    <salary>10000.0</salary>
    <fonction>Fonction1</fonction>
  </item>
  ▼ <item>
    <id>24</id>
    <name>emp2</name>
    <salary>20000.0</salary>
    <fonction>Fonction3</fonction>
  </item>
  ▼ <item>
    <id>25</id>
    <name>emp3</name>
    <salary>30000.0</salary>
    <fonction>Fonction4</fonction>
  </item>
  ▼ <item>
    <id>26</id>
    <name>emp4</name>
    <salary>40000.0</salary>
    <fonction>Fonction5</fonction>
  </item>
  ▼ <item>
    <id>27</id>
    <name>emp5</name>
    <salary>50000.0</salary>
    <fonction>Fonction6</fonction>
  </item>
</List>

```

- Maintenant, s'authentifier avec client1/client1 et aller au site : <http://localhost:8080/rest/emp> :

Vous n'avez pas le droit d'accéder à cette page. Merci de vous s'authentifier
